

# **Art around the world.**

## **A gentle way of intergration into togetherness through Art and understanding.**

Brief introduction.

### Motivation

Art is a playfull way to bring people together, when it is used as a universal language for unconditional expression. We dream in pictures and make signs in pictogramms. Traditional, indigenous and spirituall values over the centuries are expressed in Art.

A picture explains more that thousand words. To many words can easily separate people. Art knows how to connect the distinctions between cultures, by expressing the different viewpoints of an area of life. Art is an holistic language which includes emotions, feelings, intuition and illustrates "that", what can not be said in words.

### Concept

The way we want to present the content of the artprogrammes to the students of the Art schools is to focus on certain topics, which are connected with issues and valuation around different cultures, traditions or religieus backgrounds.

The leading string for this topics is known under the name of "Sacret Geometry". Sacret Geometry makes truths visible and understandable for everybody, who delve into this universal language.

These topics could, for example be:

- awareness, the beginning and the dot.
- birth, the circle and the female qualities.

- two qualities of one source, vibration and attraction.
- oneness and diversity
- male and female qualities
- collective and individuality
- basic human needs
- the lotus, symbol of universal spirituality
- ect.

By focussing on such topics the students are encourage to reflex and to deepen out these issue-areas and express there insights in an artwork. Whereby the gathering of the students are from different nationalities and cultural backgrounds, there will be an exchange of different insights through the artworks. An artwork can not be judged as good or bad, but is just an expression of an certain insight. In this way the brainfilters and the judgements of ones own cultural conditions are overruled.

A space of a deeper understanding of "the other" is created and a society of more togetherness can develop.

Lets focus on the first topic: **"awareness, te beginning and the dot"** to go beyond the abstraction into the essence.
